

**2010 User Conference - A Great Success**

Our 2010 User Conference at the Rizzo Conference Center at the University of North Carolina in Chapel Hill (home of the 2009 NCAA Basketball Champions), provided opportunity for discussions and feedback from fifteen of our client YMCAs. We were pleased with the feedback and helpful suggestions we received. The next release of Protivity will be significantly improved as a result of our discussions. Thanks to everyone for their input.

Of course, it was not all work at the conference. There was time to visit a local wine bar for an evening of relaxation. Barbara Osuna and Cindy Halstead were among the adventurous group who traveled to downtown Chapel Hill.

Thanks to everyone who attended our conference for your input and support.

**Protivity for Web 3.1.0 Release**

Bob, Craig and Steve announced at the User Conference that Protivity for Web 3.1.0 would be completed and deployed for review and testing on October 31, 2010. The YMCA of Metro Detroit has agreed to install 3.1.0 on its system and test it during the month of November. Upon completion of the testing phase, the upgrade will be installed in Detroit's live environment. General deployment will then follow at other client YMCAs. Many thanks to Jim Baksa and the Detroit staff for their help on this project.

**Symmetrical Partners With FitLinxx And ActivTrax**

Because so many of Symmetrical's partner YMCAs use either FitLinxx or ActivTrax in their fitness departments, it seems only natural that Symmetrical would integrate these popular systems into Protivity for Web. Work is under way. Should you have any suggestions, please be sure to let us know. These programs will be available early next year.

**Symmetrical Launches New Website**

If you have not yet had an opportunity to visit our all new website just click on the link below. Be sure to let us know what you think.

**Ada Byron Founder of Scientific Computing**

Recently I had opportunity to spend an afternoon at the British Museum in London and ran across an interesting article about Ada Byron, Countess of Lovelace (1815 to 1852). She was the daughter of Lord Byron, the famous romantic poet. Ada was more interested in mathematics than literature and poetry. In 1843, she wrote a series of instructions for Charles Babbage's proposed mechanical computer that would calculate Bernoulli numbers. She was the first to make a conceptual leap that had huge effect nearly 100 years later when electronic computers arrived. Click on the following link to learn more about [Ada Byron](#).
